Dear Mr. Piccari:

This is to acknowledge receipt of your email to the Public Service Commission of South Carolina. Your email will become a part of ND-2015-20-E - Duke Energy Carolinas: Foothills Transmission and Substation Project- 45-Mile Transmission Line Between Asheville, NC, Power Plant and New Substation Near Campobello, SC, and will be posted on our website under this docket.

Please let me know if you should require any additional information.

Sincerely,

Deborah Easterling
Administrative Coordinator

Subject: Duke Power Transmission Plan, docket number ND-2015-20-E.

Dear Miss Boyd, I am a property owner and Realtor selling property that has been threatened by the possibility of the Duke Power Transmission Line preposed through the Upstate Foothills passing through the mountain region of North Carolina. I believe most logical folks understand progress and the need for more electric power as areas expand and the need for more electric is required. Also most logical people would ask; why does this have to come through an area that is not going to benefit from this power. Looking at the Duke maps alternate routes can take this power line through less inhabited areas, and why can't it be place underground, like some many other utility providers have started to do. I understand its expensive but its also expensive to property owner who will loose their values for their properties. Also this is without saying any complications from health issues that may be caused by this amount of high energy transmission line traveling overhead of area that is saturated with human and expensive livestock.

I thank you in advance for your attention and all your consideration on this very important matter to the Upsate and NC mountain region.

Sincerely,
Ronald Piccari
